

Steenberg Office Park

Fibre Optic open-access

KEY BENEFITS

INSTANT (well almost) ACCESS TO WORLD CLASS BROADBAND

Fibre optic capacity and speed is almost limitless. You can now source any range of bandwidth from 1mb/s to 1 gb/s. Once the fibre is deployed you can connect to your preferred Internet Service Provider (ISP) within 14 days.

With access to fibre, world-class broadband services are available to all owners and tenants in Steenberg Office Park

MORE CHOICE

The Conduct open-access network provides the same access to all service providers which enables the ISPs to compete with a wide range of broadband service offerings. Companies are free to choose services that best meet their costs and service expectations. Once the fibre is deployed to your building you may source the best broadband services directly from any licensed service provider you choose.

The companies in the Office Park are connected to the network on request from their chosen service provider. As a client of the ISP you then pay the ISP for the service you require and any costs associated with the fibre cabling or maintenance is included in your ISP charges.

MORE CONTROL - Improved pricing and better service levels.

Since the infrastructure is shared you can source the most competitive offers. The open-access principle of our last mile network, makes it possible for users to switch from poor performing service providers without any hassle. Subject, of course, to your individual contracts, you can take advantage of more competitive service offerings in the market place as they arise.

NEW BUSINESS APPLICATIONS

With the fibre optic infrastructure, businesses have access to better telephony services, video conferencing, software-as-a-service solutions, cloud-based services, data recovery and more.

And not forgetting: ZERO UTILITY COST

This fibre utility is provided at no cost to the owners or tenants in Steenberg Office Park. There is no installation cost, or line rental, nor any obligation on the tenants to use this fibre utility.

Conduct Technologies have installed and maintain the fibre infrastructure. It is here in Steenberg Office Park – in every building - but you are not paying for it and you don't have to take advantage of it.
